

GOA is seeking applicants for the role of a Technical Officer

GOA is seeking a Technical Officer to join the team.

The Technical Officer role is a hands-on position to assist in the implementation of GOA's research and extension activities, responsible for the day-to-day management and operation of GOA's field research program.

In this role you will be directly involved in field-based research work focused on providing farm ready solutions to key issues for grain growers. GOA is a well-known and respected organisation which has been operating for more than 17 years. GOA runs a diverse research programs that cover everything from crop nutrition and disease management to weed control and farming practices and offers employees a rewarding career.

This role primarily involves basic key crop husbandry operations such as sowing, spraying and harvesting of trials but taking it to the next level. You will be central to the trialling operation through application of trial treatments, observations and measurements.

This role would be perfect for an experienced cropping farmhand looking for a new challenge, or sick of long monotonous hours on the tractors or headers. Or an early career agronomist or university graduate looking to enter the field research industry with opportunity for career development.

This is an existing position with an established organisation based in the major rural service centre of Dubbo NSW, offering a full range of services, schools and social activities.
